

# GET ON THE GRID, OFF THE GRID

## ComPod: The Customizable, Anywhere Work Shelter Solution

### GET IT DONE, ANY PLACE IT NEEDS TO HAPPEN

ComPod and ComPod Mini offer complete commercial and residential shelter solutions for the most challenging conditions in Canada. Purpose-built to be rugged, resilient, customizable, adaptable, transportable and connectable, ComPod is the answer for remote problems you probably haven't even considered yet.

### MADE FOR THE ENDS OF THE EARTH

Every one of our portable, energy-efficient units is designed with a unique modular system that uses proprietary aluminum extrusions and structural insulated panels. Both the ComPod and ComPod Mini are completely customizable for a variety of uses. These include remote and mobile communications shelters, portable data centres, site buildings, industrial workshops, camp buildings, tiny houses, and more.

### SEALED FOR YOUR PROTECTION

ComPod's modular, flat-pack design uses an aluminum frame and engineered corner blocks to connect frame components. The frame uses interfaces that accept SIP panels to form the walls, floor and ceiling. All corners are sealed with an integrated gasketing system that keeps moisture and weather outside where they belong.

ComPod Mini is built for three-season operation, but it can be upgraded to the same year-round protection as ComPod. Whatever you need it to be, and wherever you need it to go, ComPod has you covered.

### ComPod Advantages:

Fully customizable configurations.

Easily dragged by equipment when on-skid.

Light enough to sling by helicopter when not on-skid.

Custom power options including solar, battery, diesel or methanol.

Tower can be mounted on the same skid as ComPod and generator.
